Recognize

Napoleon's prostate

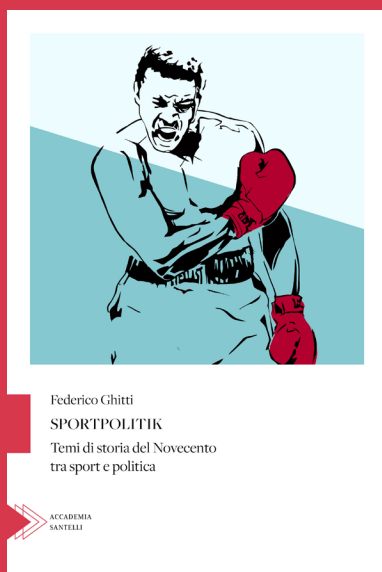

In this original journey through human history, diseases, epidemics, disorders, and syndromes take center stage, revealing themselves as powerful forces capable of shaping civilizations, altering the outcomes of wars, and even influencing the fates of emperors. Dr. Aragona's compelling and rigorous narrative guides us through the critical moments of history and into the lives of great historical figures, using a magnifying lens to uncover the often underestimated impact of invisible pathogens and physical ailments — from medieval plagues to Napoleon III's prostatitis.

Understanding the Unpredictable

This book offers a clear and engaging introduction to complex systems and chaos theory, helping readers make sense of the everyday events that so often surprise us — and sometimes even determine our survival.

It begins by exploring the key features of complex systems, networks made up of many interconnected elements, to reveal their hidden potential. It then turns to chaos theory, whose role today in understanding natural phenomena can be compared to Galileo Galilei's use of geometry to describe the laws of nature. The world is far more complex — and chaotic — than we usually imagine.

I PILASTRI OSCURI DELL'UNIVERSO

Viaggio alla scoperta del micro e macrocosmo

ACCADEMIA
SANTELLI

The Dark Pillars of the Universe

This book is a fascinating and profound journey through the most important discoveries in physics, skillfully intertwining the laws of the Macrocosm and the Microcosm, and exploring the surprising similarities between atomic-level and cosmic phenomena. It offers a captivating unified vision of the laws governing the Universe.

The author urges us to seriously reconsider the concepts of physics and astrophysics, as well as experimental data that seem established, yet reveal small cracks—cracks into which we can venture and expand, revealing the wonders that may lie beyond the known horizon.

THE BIRTH OF THE UNIVERSE FROM NOTHING

S SANTELLI
EDITORE

The birth of the Universe from nothing

Where does our universe come from?
Can the universe create itself? Why is there something instead of nothing?
Does a universe born out of nothing exclude God?

The birth of the universe has become, in recent decades, one of the central themes of scientific research. Physicists and philosophers have hypothesized the birth of the universe starting from the so-called “quantum vacuum”. But it is not enough. In this volume we demonstrate how a universe can spontaneously create itself from nothing.

Agorà

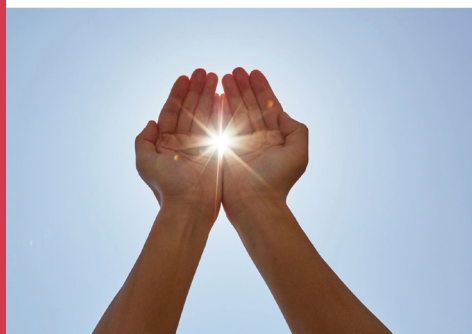

Ideas, thoughts, and reflections that help us understand the world, things, and people.

Agorà is a series designed for readers, scholars, and researchers passionate about the great themes of modernity: politics, society, and the economy — but also philosophical thought, psychology, and innovative ideas.

Mario Draghi. Hope is not a strategy.

A biography of the former ECB chief that goes beyond the image of the austere bureaucrat. It reveals the human side of the economist and the deep motivations that made him one of the foremost advocates of international cooperation and European stability.

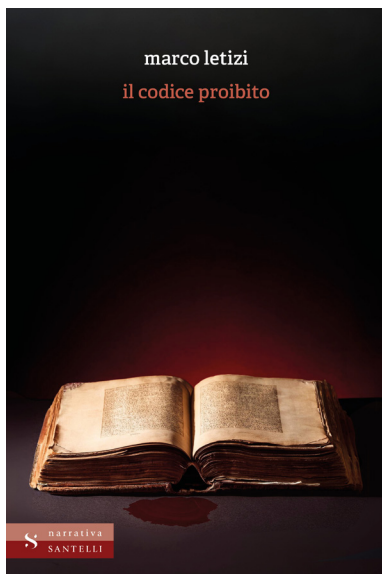

The book explores not only Draghi's remarkable career as Italy's Prime Minister, but also the intimate story of the boy who lost his parents and dreamed of becoming a basketball player, the graduate who waited for Franco Modigliani to seek admission to MIT in Boston, and the doctoral student who worked up to 18 hours a day to support both himself and his family.

(Un)doing Business

The dynamic leadership model

The Dynamic Leadership Model is a business paradigm for a company's management, organization, and communication strategies, designed to prevent the personalities of those who actively shape the business from influencing it. Everything is based on the laws of physics and on the awareness that the personality that most influences the process is that of the "director."
